

Week 3 Lit Example Reader

MACBETH: PROPHECIES AS PROPOSITIONS

Purpose: This reader gives Macbeth passages for applying Week 3's logic habit: distinguish propositions from other utterances, translate ordinary language into clear categorical form, and notice quantity, quality, and distribution.

What to watch for: Macbeth treats some spoken lines as if they were fixed logical guarantees. But not every powerful line is a clear proposition, and not every proposition has the same quantity. Before reasoning from a line, ask exactly what kind of claim it is making.

Before the Passages: The Week 3 Logic Tool

A proposition is a claim that can be treated as true or false. In categorical logic, a clear proposition has a subject, a predicate, a quality, and a quantity:

- **Subject:** what the claim is about.
- **Predicate:** what is being affirmed or denied of the subject.
- **Quality:** affirmative or negative.
- **Quantity:** universal or particular.

The four standard forms are A (All S are P), E (No S are P), I (Some S are P), and O (Some S are not P). Translating a dramatic line into standard form is not the same as proving it true. Translation only clarifies what the claim says.

Passage 1: Act 4, Scene 1 — The Apparitions Speak

Context: Macbeth returns to the witches and demands certainty. The apparitions give him commands and claims. Logic begins by sorting which lines are propositions and what their form is.

First Apparition. Macbeth! Macbeth! Macbeth! beware Macduff;
Beware the thane of Fife. Dismiss me. Enough.

Second Apparition. Be bloody, bold, and resolute; laugh to scorn
The power of man, for none of woman born
Shall harm Macbeth.

Third Apparition. Be lion-mettled, proud; and take no care
Who chafes, who frets, or where conspirers are:
Macbeth shall never vanquish'd be until
Great Birnam wood to high Dunsinane hill
Shall come against him.

Reader Notes

Here is your most assisted example. Some lines are commands or warnings; some make claims; some make predictions with conditions attached. Begin by sorting the lines before you translate them. One line about who shall harm Macbeth can be pushed toward standard categorical form, but you must still decide exactly what the subject and predicate are.

Reading task: Mark each line as command, warning, claim, or conditional prediction. Put a star beside the line that seems easiest to translate into standard form.

Passage 2: Act 5, Scenes 5 and 8 — Macbeth Tests the Claims

Context: Macbeth later learns that Birnam Wood appears to be moving because soldiers carry branches. He still leans on the other proposition: no one born of woman can harm him. Then Macduff clarifies a fact that changes the subject class.

Messenger. As I did stand my watch upon the hill,
I look'd toward Birnam, and anon, methought,
The wood began to move.

Macbeth. I pull in resolution, and begin
To doubt the equivocation of the fiend
That lies like truth: "Fear not, till Birnam wood
Do come to Dunsinane:" and now a wood
Comes toward Dunsinane.

Macbeth. Thou losest labour:
As easy mayst thou the intrenchant air
With thy keen sword impress as make me bleed:
Let fall thy blade on vulnerable crests;
I bear a charmed life, which must not yield,
To one of woman born.

Macduff. Despair thy charm;
And let the angel whom thou still hast served
Tell thee, Macduff was from his mother's womb
Untimely ripp'd.

Reader Notes

Macbeth's confidence depends on how a class has been named. The phrase *of woman born* is doing logical work, and Macduff's answer puts pressure on that phrase. From here, you need to decide how the class should be translated and whether Macbeth has been relying on a clearer claim than the language actually gave him.

Reading task: Underline the phrase *of woman born*. Circle Macduff's answer. In the margin, write what classification problem the answer creates without solving it for yourself yet.

How to Use These Passages on the Worksheet

The worksheet will ask you to translate dramatic language into logical form. Do not turn every line into the same kind of claim. Commands, predictions, categorical propositions, and conditional statements behave differently.

Strong college-level answers should do three things:

- say whether a line is a proposition before classifying it;
- identify subject, predicate, quality, and quantity when a categorical form is possible;
- explain how translation affects Macbeth's reasoning without pretending that translation proves the prophecy true.
